FOREWORD

The British Columbia Economic Accounts presented in this publication provide measures of production and consumption in different sectors of the provincial economy and in the economy as a whole. The Accounts were prepared by the Central Statistics Bureau in accordance with internationally accepted principles of economic accounting developed by the United Nations and adopted by Statistics Canada as part of the Canadian System of National Accounts. A description of the concepts, sources and methods employed for the production of the Accounts is available upon request.

Release of the 1981 B.C. Economic Accounts has been delayed by statistical problems relating to the constant dollar estimates of GDP at Market Prices and Factor Cost. Although in real terms the rates of growth of GDP at Market Prices and GDP at Factor Cost should be similar, the 1981 data produced a sizeable discrepancy. While problems of this sort have been encountered in the past, the situation with respect to 1981 was particularly acute.

At this point, it is not clear why the process of deflation should have been particularly difficult with respect to 1981 data, although it may have been related to the unusually large increases in indirect taxes during the year. These taxes, which increased by 43 percent in 1981 as a result of the introduction of the National Energy Program and an incease in the rate of Provincial Social Services Tax, had the effect of raising the value of GDP at market prices by some 4.2 percent.

Whatever the reason, the calculated rate of growth of real GDP at market prices for 1981 based on current methodology appeared to be unreasonably high, and had to be suppressed. The Bureau will continue its efforts to resolve the deflation problem and may release real Market Price growth rates at a later date. In the meantime, users are referred to the constant dollar estimate of total GDP at factor cost derived from aggregating the industry accounts.

With the current edition of the Accounts, a change has also been introduced in the treatment of differences, such as those noted above, between estimates of real growth expressed in Market Prices and Factor Cost for years prior to 1981. It had been the practice in recent years to ensure consistency in the growth rates of GDP on a Market Price and Factor Cost basis by making appropriate adjustments to the latter. Given the size of the discrepancy for 1981, this practice has been discontinued. As a result, differences exist between growth rates on a Factor Cost and Market Price basis for earlier years. While these discrepancies add to the complexity of interpreting the data, they are to be anticipated given the intricacy of the production process, and the indicative, or experimental, nature of many of the statistics on which they are based.
